Art Unit: 2174

DETAILED ACTION

- 1. This application has been examined.
- 2. The amendments filed 5/27/07 and 4/3/07 have been entered.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1, 4-7, 10-13, 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fernandez et al (2005/0044504) and Bowman et al (2004/0111673).
- 5. Regarding claim 1, Fernandez et al show a computer implemented method comprising: retrieving a plurality of element properties corresponding to a plurality of elements (abstract, Figures 2, 3, para 7, 15), wherein the elements are adapted to be displayed on a display device (para 14, 24, 48), and wherein the element properties of at least one of the elements includes one or more excluded environment identifiers (para 22, 24, 42, 44-45); identifying display environment identifiers corresponding to the display device (para 44-46); comparing the display environment identifiers with the excluded environment identifiers and displaying, on the display device, one or more of

Art Unit: 2174

the elements in response to the comparison (para 8, 17, 24, 47, 48). Fernandez et al. do not go into the details of

grouping a first set of elements, selected from a plurality of elements, into a first container, wherein each of the plurality of elements and the first container are adapted to be displayed on a display device; grouping a second plurality of elements, selected from the plurality of elements, into a second container. wherein the second container is adapted to be displayed on the display device;

associating a first set of element properties, selected from a plurality of element properties, to the first container and a second set of element properties, selected from the plurality of element properties, to the second container, wherein at least one of the plurality of element properties is an excluded environment identifier; but do mention grouping a plurality of elements into a container, wherein the container is an element and includes element properties and wherein the excluded environment identifier is stored with the container's element properties; and refraining from displaying the container and the plurality of grouped elements on the display device (para 19, 25, 35) for efficient grouping of elements. Furthermore, Bowman et al. do show those features as follows:

grouping a first set of elements, selected from a plurality of elements, into a first container, wherein each of the plurality of elements and the first container are adapted to be displayed on a display device (para 194);

grouping a second plurality of elements, selected from the plurality of elements, into a second container, wherein the second container is adapted to be displayed on the display device (para 194);

associating a first set of element properties, selected from a plurality of element properties, to the first container and a second set of element properties, selected from Art Unit: 2174

the plurality of element properties, to the second container, wherein at least one of the plurality of element properties is an excluded environment identifier (para 195); for efficient grouping of elements. It would have been obvious to a person with ordinary skill in the art to have this in Fernandez et al, because it would be an efficient way to group elements.

- 6. Regarding claim 4,note the registering one or more renderer keys at the display device; comparing the renderer keys with the excluded environment identifiers; and displaying the elements on the display device that do not have excluded environment identifiers that match the renderer keys (para 44, 46, 47).
- 7. Regarding claim 5, note the executing a rendering software application on the display device, wherein the rendering software application registers the renderer keys (para 16, 33, 38).
- 8. Regarding claim 6, at least one of the elements is a graphical user interface control (para 7 only one need be present to satisfy the claim as the different options are recited in alternative form in the claim).
- 9. Claims 7,10-12 show the same features as claims 1, 4-6 respectively, and are rejected for the same reasons.

Application/Control Number: 10/770,282 Page 5

Art Unit: 2174

10. Claims 13, 16-18 show the same features as claims 1, 4-6 respectively, and are rejected for the same reasons.

- 11. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. Do note though that the 101 rejection has been removed in view of the amendment.
- 12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
